SCADA for AI

Supervisory visibility, control and evidence for AI and connected operations.

Price at a glance — includes UK VAT at 20%

Billing	Monitor	Operate	Plant	Enterprise
Monthly	£349	£999	£2,750	Talk to us
Annual	£3,490	£9,990	£27,500	Talk to us

Operating limits

Capability	Monitor	Operate	Plant	Enterprise
Sites	1	3	10	Unlimited
Devices	5	25	150	Unlimited
Tags	100	1,000	10,000	Unlimited
Acquisition	1 minute	10 seconds	1 second	Agreed
History	13 months	24 months	7 years	Agreed
Cameras	2	10	40	Agreed

Human oversight is built in

AI analyses readings and recommends action. Where commands are enabled, a named person requests the command and a different owner or administrator approves it before the gateway collects it. Every step is recorded.

How SCADA for AI sits with APIP

Your APIP position	SCADA for AI
APIP Professional	AI-operations supervision is included; add a plant tier for physical sensors and cameras.
APIP Enterprise	Plant-tier SCADA for AI is included for the organisation.
No APIP subscription	Buy SCADA for AI separately; APIP process intelligence remains a separate subscription.

What each plan includes

Monitor

£349 a month · £3,490 a year — See everything, change nothing.

- 1 site, up to 5 devices and 100 tags
- 1-minute acquisition, 13 months of history
- 2 cameras with frame analysis
- Control rules, alerts and the human review queue
- Plain-language answers on your own readings
- CSV and JSON exports, append-only supervisory log
- Monitor only — no commands leave the system

Operate

£999 a month · £9,990 a year — Supervise and act, with two-person approval.

- 3 sites, up to 25 devices and 1,000 tags
- 10-second acquisition, 24 months of history
- 10 cameras with frame analysis
- Supervisory commands with two-person approval
- Predictive maintenance signals on asset trends
- Shift handover pack and scheduled reports
- Everything in Monitor

Plant

£2,750 a month · £27,500 a year — Multi-site operations with full evidence.

- 10 sites, up to 150 devices and 10,000 tags
- 1-second acquisition, 7 years of history
- 40 cameras with frame analysis
- MQTT/Sparkplug and OPC UA bridges
- Custom control rules and asset models
- Evidence packs mapped to ISO/IEC 42001 and ISO 31000
- Everything in Operate

Enterprise

Talk to us a month · Talk to us a year — Unlimited sites, your governance model.

- Unlimited sites, devices and tags
- Private deployment options and data residency choices
- Standalone installable operator application
- Single sign-on, custom roles and approval routes
- Named support contact and onboarding programme
- Included with the APIP Enterprise plan

Common buying questions

Question	Answer
What counts as a tag?	One measured or controlled point, such as temperature, current, state of charge or a setpoint.
Must I open my firewall?	No. The gateway makes outbound connections only and uses a replaceable device key.
Can AI operate plant by itself?	No. AI analyses and recommends; enabled commands require named human request and separate approval.
What if the link drops?	The gateway buffers readings locally. Missing data remains visible as a gap and is never invented.

Questions? Email contact@automatedgovernancesystems.com or visit agspip.app/scada-for-ai/pricing. Prices include UK VAT at 20%. AI recommends; accountable people approve operational decisions.
